1. Set up integrals to find the mass, moments, and center of mass of a the triangular lamina bounded by the x - and y - axes and $y = 4 - 2x$. (As always, assume the density of this lamina to be 1.)
2. Set up integrals to find the mass, moment about the x -axis, and moment about the y -axis of the lamina bounded by $y = \sqrt{x}$ and $y = \frac{1}{3}x$. Give the formula to find the coordinates of the center of mass.
