Excel

Definitions/Glossary

Cell Reference vs Absolute Cell Reference

A7 vs \$A\$7
 \$A7
 A\$7

Functions

=IF(condition, true_statement, false_statement)

e.g. =IF(L19>74.2302,1,0)

=COUNTIF(range, "condition")

e.g. =COUNTIF(L16:L96, ">74.2302")

=HLOOKUP(cell, range, row)

e.g. =HLOOKUP(G7, K\$2:P\$3, 2)

=VLOOKUP(cell, range, row)

e.g. =VLOOKUP(F24, K\$2:L\$8, 2)

Sorting Data

Block Range of Data

Include Header Row in Block

Select *Data/Sort*

Specify Column(s) to Sort By

Specify Ordering Type (Ascending/Descending)

Caution:

Include all of the data on a each row in the sort block

or face the consequences of sundering the data integrity

Data Statistics

Mean = arithmetic average value

Median = middle score of the sorted data

 odd number of values: exact middle score

 even number of values: average of two middle scores

Mode = most frequent value

Minimum = smallest data value

 in ascending sort order, the first data value

Maximum = largest data value

 in ascending sort order, the last data value

Range = Maximum - minimum

Importing Data

- Block Data in Source File

- Copy Block to Spreadsheet

 - Note: Typically each row of data is copied into a single cell

- Parse the Copied Data

 - Select *Data/Text to Columns* to convert data into multiple columns (one for each data value)
